EDUCATION

University of the West of England, Phenikaa Campus *June 2026*
BSc (Hons) Computer Science (Artificial Intelligence) | First Class Honours (76.40/100)

- **Dean's scholarship** (**50% tuition fees for 3 years**) | **Second-highest entrance rank** .

INTERNSHIP EXPERIENCE

Viettel Networks (VTNet) - Technology Platform & Digital Transformation Center *July 2026 – October 2026*
AI Research Intern | Mobile Solutions Department

- Built a reliability harness for **LLM tool-calling agents**, covering schema/domain validation, safe dispatch, bounded retries, deterministic repair, and controlled recovery.
- Designed **fault-injection experiments** on **τ²-bench** to evaluate execution failures, WRITE-side-effect safety, retry behavior, and operational overhead across A0–A3.
- Implemented **output/postcondition validation and replay safeguards** to prevent unsafe or duplicate execution of state-changing tool calls.

Aggregatori Capaci (AC), Hanoi Office *June 2024 – August 2024*
Engineering Intern (full-time)

- Implemented computer vision workflows for **car damage inspection**, **brand sorting**, and **license plate recognition**.
- Automated image data collection and labelling for **model training**.
- Supported production deployment and integration of **AI pipelines** under **Agile team workflows**.

PROJECTS

Evaluating RAG and Iterative Reading for Large Codebase QA - Python, ChromaDB, RAG, LLM Evaluation

- Built a QA evaluation pipeline comparing **long-context prompting**, **RAG**, and **bounded iterative reading** across a **60-question benchmark** for code repositories and technical documents.
- Implemented **retrieval**, **vector indexing**, **citation tracking**, **LLM-as-judge scoring**, and **latency/model-call logging**.
- Designed **context-rot experiments** showing iterative reading **improved citation grounding** over RAG, with **higher latency** and **computational cost**.

BRFN Digital Marketplace with AI Produce Quality Inspection - Django, MySQL, Docker, CNN, Grad-CAM

- Developed a **Django marketplace** with **producer/customer roles**, **authentication**, **product listings**, **cart**, **order flow**, and **MySQL integration**.
- **Led** a **3-person team** on **sprint planning**, **Jira task management**, **Git workflow**, **system architecture**, and **AI recommendation integration**.
- Designed a **CNN-based** produce inspection module for **fresh/rotten classification**, **quality grading**, and **explainable AI** support.

TECHNICAL SKILLS

Languages: Python, C, SQL, HTML/CSS, Kotlin
AI/ML: TensorFlow, scikit-learn, YOLOv8, CNNs, RAG, LLM evaluation
Backend & Databases: Flask, Django, MySQL, ChromaDB, REST APIs
Tools & Deployment: Git, GitHub, Docker, AWS EC2, Google Colab

AWARDS & COMPETITIONS

First Runner-up, Future Business Analyst Season 5 - **RMIT University Vietnam**

- Selected from **~100 initial teams**; contributed **data analysis** for the team's business case solution.

Second Prize, ISIC 2024 - International Student Innovation Challenge, Phenikaa

- Awarded for an **Intelligent Vehicle Observation and Analysis System** using **computer vision**.

Global Innovative Technology Award - 10th International Students' Start-up Conference, Busan, Korea

- Recognised for a **technology-driven innovation project presentation**.
