EDUCATION

University of the West of England, Phenikaa Campus *May 2026*

BSc (Hons) Computer Science (Artificial Intelligence) | GPA (confirmed): **77.45/100 (Distinction range)**

- **Dean's scholarship** (**50% tuition fees for 3 years**).
- Relevant coursework: **Artificial Intelligence**, **Machine Learning**, **Advanced Algorithms**, **Advanced Software Development**, Computer Systems Architecture.

PROJECTS

Evaluating RAG and Iterative Reading for Large Codebase QA - Python, RAG, ChromaDB, LLM Evaluation

- Built a QA evaluation pipeline comparing **long-context prompting**, **standard RAG**, and **bounded iterative reading** across a **60-question benchmark** for code repositories and technical documents.
- Implemented **chunking**, **embedding retrieval**, **vector indexing**, **line-range citation tracking**, **LLM-as-judge scoring**, and **latency/model-call logging**.
- Designed **context-rot experiments** showing iterative reading improved **citation grounding** over RAG, with higher latency and computational cost.

BRFN Digital Marketplace with AI Produce Quality Inspection - Django, MySQL, Docker, CNN, Grad-CAM

- Developing a **Django marketplace** with **producer/customer roles**, authentication, product listings, cart, order flow, and **MySQL integration**.
- Leading a **3-person team** on sprint planning, **Jira** task breakdown, **Git** workflow, architecture, and **AI-system integration**.
- Designed a **CNN-based produce inspection** module for **fresh/rotten classification**, quality grading, and **explainable AI (XAI)**-based decision support.

Vehicle Damage Detection System - YOLOv8, Python, Label Studio

- Developed a **YOLOv8-based vehicle damage detection model** using custom image data collected through **web crawling** and manually annotated in **Label Studio**.
- Built image collection, labelling, preprocessing, and training workflows for **automated vehicle inspection**.

Critical Care Unit Management System - Flask, MySQL, Docker, ML

- Built a **Flask/MySQL dashboard** for patient nutrition referrals, **role-based access**, dietitian assignment, and **ML-assisted patient-status tracking**.
- Containerised the application with **Docker** and prepared deployment using **Gunicorn**, **Nginx**, and **AWS EC2**.

TECHNICAL SKILLS

Languages: Python, C, SQL, HTML/CSS, Kotlin
AI/ML: TensorFlow, scikit-learn, YOLOv8, RAG, CNNs, supervised learning, model evaluation
Backend & Databases: Flask, Django, MySQL, REST API
Tools & Deployment: Git, GitHub, Docker, Google Colab, AWS EC2, ChromaDB

INTERNSHIP EXPERIENCE

Aggregatori Capaci (AC), Hanoi Office *June 2024 - August 2024*

Engineering Intern (full-time)

- Implemented computer vision workflows for **car damage inspection**, **brand sorting**, and **license plate recognition**.
- Automated image data collection and labelling for **model training**.
- Supported production deployment and integration of **AI pipelines** under **Agile team workflows**.

AWARDS & COMPETITIONS

1st Runner-up, Future Business Analyst Season 5 - **RMIT University Vietnam**

- Selected from **~100 initial teams**; contributed **data analysis** for the team's business case solution.

Second Prize, ISIC 2024 - International Student Innovation Challenge, Phenikaa

- Awarded for an **Intelligent Vehicle Observation and Analysis System** using **computer vision**.

Global Innovative Technology Award - 10th International Students' Start-up Conference, Busan, Korea

- Recognised for a **technology-driven innovation project presentation**.
